THE REPLY FILED 12 August 2004 FAILS TO PLACE THIS APPLICATION IN CONDITION FOR ALLOWANCE. Therefore, further action by the applicant is required to avoid abandonment of this application. A proper reply to a inal rejection under 37 CFR 1.113 may only be either: (1) a timely filed amendment which places the application in condition for allowance; (2) a timely filed Notice of Appeal (with appeal fee); or (3) a timely filed Request for Continued Examination (RCE) in compliance with 37 CFR 1.114.						
PERIOD FOR RE	PLY [check either a) or b)]

Continuation of 5. does NOT place the application in condition for allowance because: regarding applicant's argument on page 8 of amendment filed 8/12/04 that Kao or Noordegraaf does not teach the need to provide an electrically insulating coating on a released MEMS device, this argument is not persuasive. Kao teaches a MEMS device 310 and Noordegraaf teaches (see page 190, seventh paragraph) a parylene coating used for electronic components (MEMS device is a type of electronic component). Noordegraaf further states (see, for example, page 190, first paragraph) that the parylene coating is for isolation and protection. Regarding applicant's argument on the bottom of page 8 that Kao discloses a water-soluble first layer and teaches away from using a water-insoluble coating, this argument is not persuasive. The water-soluble first layer is used in the process of formation of the MEMS device and does not function in the same way as Noordegraaf's parylene coating. Noordegraaf's parylene coating is formed after the formation of the MEMS device and is part of the final structure whereas Kao's water-soluble first layer is used in an intermediate step of forming the MEMS device and is consequently removed. Therefore, it would have been obvious to one of ordinary skill in the art to include Noordegraaf's parylene coating to the final structure of Kao's device in order to isolate and protect it.
